On Logic Embeddings and Gödel's God

Christoph Benzmüller[1]
Freie Universität Berlin

(jww Bruno Woltzenlogel Paleo, TU Wien)

November 14, 2014

LogInf 2014, Universität Kassel

[1] Supported by DFG Heisenberg Stipendium BE 2501/9-1

This talk: two related topics

Embeddings of expressive logics in classical higher-order logic (HOL)

(own research since about 2008)

Application in Philosophy: study of Gödel's ontological argument

(jww with Bruno since 2013)

This talk: outline

Gödel's ontological argument — Introduction

Embeddings of expressive logics in HOL / Automation

Gödel's ontological argument — Results

Quo facto, quando orientur controversiae, non magis disputatione opus erit inter duos philosophos, quam inter duos Computistas. Sufficiet enim calamos in manus sumere sedereque ad abacos, et sibi mutuo ...dicere: calculemus. (Leibniz, 1684)

If controversies were to arise, there would be no more need of disputation between two philosophers than between two accountants. For it would suffice to take their pencils in their hands, to sit down to their slates, and to say to each other ...: Let us calculate.

(Translation by Russell)

Required:
characteristica universalis and **calculus ratiocinator**

Ontological argument for the existence of God

We focused on Gödel's modern version in higher-order modal logic

Automation with provers for higher-order classical logic (HOL)

- confirmation of known results
- detection of some novel results
- systematic variation of the logic settings
- exploited HOL as a universal metalogic via logic embeddings (characteristica universalis?)

A Long History

pros and cons

… Anselm v. C. Gaunilo … Th. Aquinas …… Descartes Spinoza Leibniz … Hume Kant … Hegel … Frege … Hartshorne Malcolm Lewis Plantinga Gödel …

Anselm's notion of God (Proslogion, 1078):

"God is that, than which nothing greater can be conceived."

Gödel's notion of God:

"A God-like being possesses all 'positive' properties."

To show by logical reasoning:

"God exists."

$$\exists x G(x)$$

… Anselm v. C. Gaunilo … Th. Aquinas … … Descartes Spinoza Leibniz … Hume Kant … Hegel … Frege … Hartshorne Malcolm Lewis Plantinga Gödel …

Anselm’s notion of God (Proslogion, 1078):

“God is that, than which nothing greater can be conceived.”

Gödel’s notion of God:

“A God-like being possesses all ‘positive’ properties.”

To show by logical reasoning:

“God exists.”

$$\exists x G(x)$$

... Anselm v. C. Gaunilo ... Th. Aquinas ...... Descartes Spinoza Leibniz ... Hume Kant ... Hegel ... Frege ... Hartshorne Malcolm Lewis Plantinga Gödel ...

Anselm's notion of God (Proslogion, 1078):

"God is that, than which nothing greater can be conceived."

Gödel's notion of God:

"A God-like being possesses all 'positive' properties."

To show by logical reasoning:

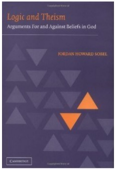
"Necessarily God exists."

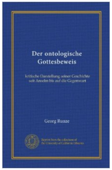
$$\Box \exists x G(x)$$

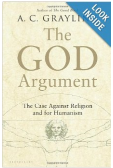
Different Interests in Ontological Arguments:

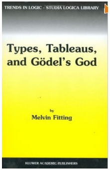
- Philosophical: Boundaries of Metaphysics & Epistemology
  - We specify a metaphysical concept (God),
  - but we want to draw a conclusion for the real world.
- Theistic: Successful argument could convince atheists?
- Ours: Can computers (theorem provers) be used . . .
  - . . . to formalize the definitions, axioms and theorems?
  - . . . to verify the arguments step-by-step?
  - . . . to fully automate (sub-)arguments?

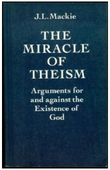
The Ontological Proof Today

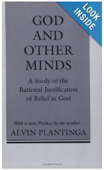


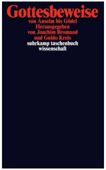


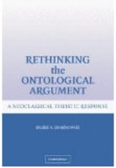


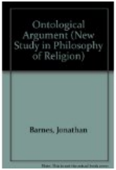


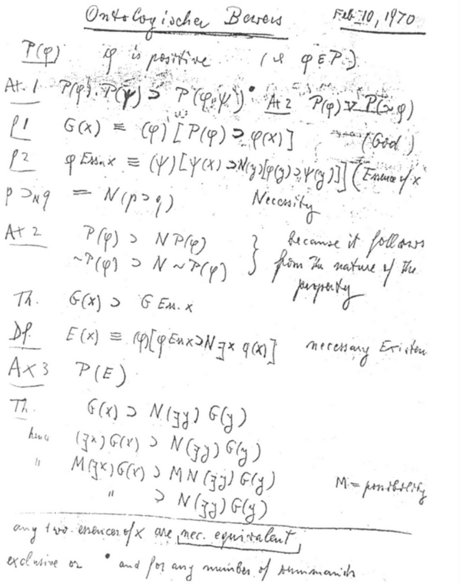












Ontologischer Beweis Feb 10, 1970

$P(\varphi)$ φ is positive ($\varphi \in P$)

At. 1 $P(\varphi) . P(\psi) \supset P(\varphi . \psi)$ At 2 $P(\varphi) \vee P(\sim \varphi)$

D1 $G(x) \equiv (\varphi)[P(\varphi) \supset \varphi(x)]$ (God)

D2 $\varphi \, Ess. x \equiv (\psi)[\psi(x) \supset N(y)[\varphi(y) \supset \psi(y)]]$ (Essence of x)

$p \supset_N q = N(p \supset q)$ Necessity

At 2 $P(\varphi) \supset N P(\varphi)$, $\sim P(\varphi) \supset N \sim P(\varphi)$ because it follows from the nature of the property

Th. $G(x) \supset G \, Ess. x$

Df. $E(x) \equiv (\varphi)[\varphi \, Ess. x \supset N (\exists x) \varphi(x)]$ necessary Existence

Ax 3 $P(E)$

Th. $G(x) \supset N (\exists y) G(y)$

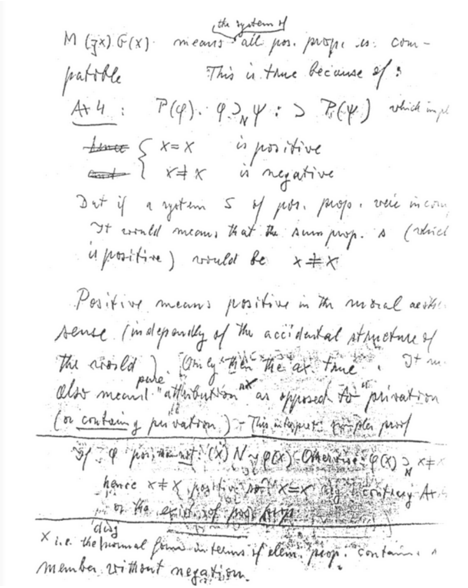
hence $(\exists x) G(x) \supset N (\exists y) G(y)$

" $M (\exists x) G(x) \supset M N (\exists y) G(y)$

" $\supset N (\exists y) G(y)$ M = possibility

any two essences of x are nec. equivalent

exclusive or . and for any number of summands



$M (\exists x) G(x)$ means the system of all pos. prop. is compatible. This is true because of:

At 4: $P(\varphi) . \varphi \supset_N \psi : \supset P(\psi)$ which impl

~~hence~~ $x = x$ is positive

~~and~~ $x \neq x$ is negative

But if a system S of pos. prop. were incom. It would mean that the sum prop. s (which is positive) would be $x \neq x$

Positive means positive in the moral aesth. sense (independently of the accidental structure of the world). Only then the ax. true. It m. also mean pure "attribution"[x] as opposed to "privation" (or containing privation). This interpret. simpler proof

If φ pos. not: $(x) N \sim \varphi(x)$. Otherwise: $\varphi(x) \supset_N x \neq x$ hence $x \neq x$ positive not $x = x$ contrary At. or the exist. of pos. prop.

x i.e. the disj. normal form in terms of elem. prop. contains a member without negation.

Scott's Version of Gödel's Axioms, Definitions and Theorems

Axiom A1	Either a property or its negation is positive, but not both:	$\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$
Axiom A2	A property necessarily implied by a positive property is positive:	$\forall\phi\forall\psi[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$
Thm. T1	Positive properties are possibly exemplified:	$\forall\phi[P(\phi) \rightarrow \Diamond\exists x\phi(x)]$
Def. D1	A *God-like* being possesses all positive properties:	$G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$
Axiom A3	The property of being God-like is positive:	$P(G)$
Cor. C	Possibly, God exists:	$\Diamond\exists x G(x)$
Axiom A4	Positive properties are necessarily positive:	$\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$
Def. D2	An *essence* of an individual is a property possessed by it and necessarily implying any of its properties:	$\phi\ ess\ x \leftrightarrow \phi(x)\ \wedge\ \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$
Thm. T2	Being God-like is an essence of any God-like being:	$\forall x[G(x) \rightarrow G\ ess\ x]$
Def. D3	*Necessary existence* of an individual is the necessary exemplification of all its essences:	$NE(x) \leftrightarrow \forall\phi[\phi\ ess\ x \rightarrow \Box\exists y\phi(y)]$
Axiom A5	Necessary existence is a positive property:	$P(NE)$
Thm. T3	Necessarily, God exists:	$\Box\exists x G(x)$

Axiom A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive: $\forall\phi\forall\psi[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall\phi[P(\phi) \rightarrow \Diamond\exists x\phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\Diamond\exists xG(x)$

Axiom A4 Positive properties are necessarily positive: $\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An *essence* of an individual is a property possessed by it and necessarily implying any of its properties: $\phi \; ess \; x \leftrightarrow \boxed{\phi(x) \wedge} \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

Thm. T2 Being God-like is an essence of any God-like being: $\forall x[G(x) \rightarrow G \; ess \; x]$

Def. D3 *Necessary existence* of an individual is the necessary exemplification of all its essences: $NE(x) \leftrightarrow \forall\phi[\phi \; ess \; x \rightarrow \Box\exists y\phi(y)]$

Axiom A5 Necessary existence is a positive property: $P(NE)$

Thm. T3 Necessarily, God exists: $\Box\exists xG(x)$

Difference to Gödel (who omits this conjunct)

Axiom A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive: $\forall\phi\forall\psi[(P(\phi) \wedge \boxed{\Box}\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall\phi[P(\phi) \rightarrow \Diamond\exists x\phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\boxed{\Diamond}\exists xG(x)$

Axiom A4 Positive properties are necessarily positive: $\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An *essence* of an individual is a property possessed by it and necessarily implying any of its properties: $\phi \ ess \ x \leftrightarrow \phi(x) \wedge \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

Thm. T2 Being God-like is an essence of any God-like being: $\forall x[G(x) \rightarrow G \ ess \ x]$

Def. D3 *Necessary existence* of an individual is the necessary exemplification of all its essences: $NE(x) \leftrightarrow \forall\phi[\phi \ ess \ x \rightarrow \Box\exists y\phi(y)]$

Axiom A5 Necessary existence is a positive property: $P(NE)$

Thm. T3 Necessarily, God exists: $\Box\exists xG(x)$

Modal operators are used

Axiom A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

Axiom A2 A property necessarily implied by a positive property is positive:
$\boxed{\forall\phi\forall\psi}[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

Thm. T1 Positive properties are possibly exemplified: $\forall\phi[P(\phi) \rightarrow \Diamond\exists x\phi(x)]$

Def. D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \boxed{\forall\phi}[P(\phi) \rightarrow \phi(x)]$

Axiom A3 The property of being God-like is positive: $P(G)$

Cor. C Possibly, God exists: $\Diamond\exists xG(x)$

Axiom A4 Positive properties are necessarily positive: $\forall\phi[P(\phi) \rightarrow \Box P(\phi)]$

Def. D2 An *essence* of an individual is a property possessed by it and necessarily implying any of its properties: $\phi\ ess\ x \leftrightarrow \phi(x) \wedge \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

Thm. T2 Being God-like is an essence of any God-like being: $\forall x[G(x) \rightarrow G\ ess\ x]$

Def. D3 *Necessary existence* of an individual is the necessary exemplification of all its essences: $NE(x) \leftrightarrow \forall\phi[\phi\ ess\ x \rightarrow \Box\exists y\phi(y)]$

Axiom A5 Necessary existence is a positive property: $P(NE)$

Thm. T3 Necessarily, God exists: $\Box\exists xG(x)$

second-order quantifiers

How to automate Higher-Order Modal Logic?

Challenge: No provers for *Higher-order Modal Logic* (HOML)

Our solution: **Embedding in *Higher-order Classical Logic* (HOL)**

Then use existing HOL theorem provers for reasoning in HOML

[BenzmüllerPaulson, Logica Universalis, 2013]

Previous empirical findings:

Embedding of *First-order Modal Logic* in HOL works well

[BenzmüllerOttenRaths, ECAI, 2012]

[Benzmüller, LPAR, 2013]

Simple Types $\alpha ::= o \mid \iota \mid \mu \mid \alpha_1 \rightarrow \alpha_2$

HOL $s, t ::= C_\alpha \mid x_\alpha \mid (\lambda x_\alpha s_\beta)_{\alpha\rightarrow\beta} \mid (s_{\alpha\rightarrow\beta}\, t_\alpha)_\beta \mid$
$(\neg_{o\rightarrow o}\, s_o)_o \mid (s_o \vee_{o\rightarrow o\rightarrow o} t_o)_o \mid (\forall_{(\alpha\rightarrow o)\rightarrow o}\, s_{\alpha\rightarrow o})_o$

(note: binder notation $\forall x_\alpha t_o$ as syntactic sugar for $\forall_{(\alpha\rightarrow o)\rightarrow o} \lambda x_\alpha t_o$)

HOL with Henkin semantics is (meanwhile) well understood

- Origin [Church,JSymbLog,1940]
- Henkin semantics [Henkin,JSymb.Log,1950] [Andrews, JSymbLog,1971,1972]

\qquad \text{Ax}
$$

The equations in Ax are given as axioms to the HOL provers!

Example

HOML formula	$\Diamond\exists x G(x)$
HOML formula in HOL	valid $(\Diamond\exists x G(x))_{\mu\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\mu (\Diamond\exists x G(x))_{\mu\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x G(x))_{\mu\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gxu)$

Expansion: user or prover may flexibly choose expansion depth

What are we doing?

In order to prove that φ is valid in HOML,
–> we instead prove that valid $\varphi_{\mu\to o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

For the experts: soundness and completeness wrt Henkin semantics

Example

HOML formula	$\Diamond\exists x G(x)$
HOML formula in HOL	valid $(\Diamond\exists x G(x))_{\mu\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\mu (\Diamond\exists x G(x))_{\mu\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x G(x))_{\mu\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gxu)$

Expansion: user or prover may flexibly choose expansion depth

What are we doing?

In order to prove that φ is valid in HOML,
–> we instead prove that valid $\varphi_{\mu\to o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

For the experts: soundness and completeness wrt Henkin semantics

Example

HOML formula	$\Diamond \exists x G(x)$
HOML formula in HOL	valid $(\Diamond \exists x G(x))_{\mu \to o}$
expansion, $\beta\eta$-conversion	$\forall w_{\mu} (\Diamond \exists x G(x))_{\mu \to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_{\mu} \exists u_{\mu} (rwu \wedge (\exists x G(x))_{\mu \to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_{\mu} \exists u_{\mu} (rwu \wedge \exists x Gxu)$

Expansion: user or prover may flexibly choose expansion depth

What are we doing?

In order to prove that φ is valid in HOML,
–> we instead prove that valid $\varphi_{\mu \to o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

For the experts: soundness and completeness wrt Henkin semantics

Example

HOML formula	$\Diamond\exists x G(x)$
HOML formula in HOL	valid $(\Diamond\exists x G(x))_{\mu\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\mu (\Diamond\exists x G(x))_{\mu\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x G(x))_{\mu\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gxu)$

Expansion: user or prover may flexibly choose expansion depth

What are we doing?

In order to prove that φ is valid in HOML,
–> we instead prove that valid $\varphi_{\mu\to o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

For the experts: soundness and completeness wrt Henkin semantics

Example

HOML formula	$\Diamond\exists x G(x)$
HOML formula in HOL	valid $(\Diamond\exists x G(x))_{\mu\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\mu (\Diamond\exists x G(x))_{\mu\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge (\exists x G(x))_{\mu\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\mu \exists u_\mu (rwu \wedge \exists x Gxu)$

Expansion: user or prover may flexibly choose expansion depth

What are we doing?

In order to prove that φ is valid in HOML,

Soundness and Completeness

$\models^{L} \varphi$ iff $\mathsf{Ax} \models^{HOL}_{\text{Henkin}} \mathit{valid}\, \varphi_{\mu \to o}$

Logic L:

- Higher-order Modal Logics [BenzmüllerWoltezenlogelPaleo, ECAI, 2014]
- First-order Multimodal Logics [BenzmüllerPaulson, LogicaUniversalis, 2013]
- Propositional Multimodal Logics [BenzmüllerPaulson, Log.J.IGPL, 2010]
- Quantified Conditional Logics [Benzmüller, IJCAI, 2013]
- Propositional Conditional Logics [BenzmüllerEtAl., AMAI, 2012]
- Intuitionistic Logics [BenzmüllerPaulson, Log.J.IGPL, 2010]
- Access Control Logics [Benzmüller, IFIP SEC, 2009]
- Logic Combinations [Benzmüller, AMAI, 2011]
- . . . more is on the way . . .

Soundness and Completeness (and Cut-elimination)

$\models^L \varphi$ iff $Ax \models^{HOL}_{\text{Henkin}} valid\, \varphi_{\mu\to o}$ (iff $Ax \vdash^{\text{seq}^{\text{HOL}}}_{\text{cut-free}} valid\, \varphi_{\mu\to o}$)

Logic L:

- Higher-order Modal Logics [BenzmüllerWoltezenlogelPaleo, ECAI, 2014]
- First-order Multimodal Logics [BenzmüllerPaulson, LogicaUniversalis, 2013]
- Propositional Multimodal Logics [BenzmüllerPaulson, Log.J.IGPL, 2010]
- Quantified Conditional Logics [Benzmüller, IJCAI, 2013]
- Propositional Conditional Logics [BenzmüllerEtAl., AMAI, 2012]
- Intuitionistic Logics [BenzmüllerPaulson, Log.J.IGPL, 2010]
- Access Control Logics [Benzmüller, IFIP SEC, 2009]
- Logic Combinations [Benzmüller, AMAI, 2011]
- . . . more is on the way . . .

- Takeuti (1953): defined GLC (generalized logical calculus) by extending Gentzen's LK; conjectured cut-elimination for GLC
- Schütte (1960): simplified verion GLC; gave a semantic characterization Takeuti's conjecture.
- Tait (1966): proved Schütte's conjecture.
- Takahashi (1967), Prawitz (1968): proved higher-order versions of the conjecture.
- Girard (1971): Takeuti's conjecture as a consequence of strong normalization for System F.
- Andrews (1971): Completeness of resolution in elementary type theory with abstract consistency technique.
- Takeuti (1975): Henkin complete cut-free sequent calculus with extensionality.
- Benzmüller et al. (2004, 2009), Brown (2004), and Brown and Smolka (2010): Various complete cut-free calculi with/without extensionality, use of abstract consistency technique

One-sided sequent calculus $\mathcal{G}_{\beta\mathfrak{f}\mathfrak{b}}$ [BenzmüllerBrownKohlhase, LMCS, 2009]
(Δ: finite sets of β-normal closed formulas, $\Delta * \mathbf{A}$ stands for $\Delta \cup \{\mathbf{A}\}$,
$cwff_\alpha$: set of closed terms of type α, $\doteq$ abbreviates Leibniz equality):

Base Rules

$$\frac{\mathbf{A} \text{ atomic (\& } \beta\text{-normal)}}{\Delta * \mathbf{A} * \neg\mathbf{A}}\,\mathcal{G}(init) \qquad \frac{\Delta * \mathbf{A}}{\Delta * \neg\neg\mathbf{A}}\,\mathcal{G}(\neg) \qquad \frac{\Delta * \neg\mathbf{A} \quad \Delta * \neg\mathbf{B}}{\Delta * \neg(\mathbf{A} \vee \mathbf{B})}\,\mathcal{G}(\vee_-)$$

$$\frac{\Delta * \mathbf{A} * \mathbf{B}}{\Delta * (\mathbf{A} \vee \mathbf{B})}\,\mathcal{G}(\vee_+) \qquad \frac{\Delta * \neg\,(\mathbf{A}\mathbf{C}){\downarrow_\beta} \quad \mathbf{C} \in cwff_\alpha}{\Delta * \neg\Pi^\alpha\mathbf{A}}\,\mathcal{G}(\Pi_-^{\mathbf{C}}) \qquad \frac{\Delta * (\mathbf{A}c){\downarrow_\beta} \quad c_\alpha\, new}{\Delta * \Pi^\alpha\mathbf{A}}\,\mathcal{G}(\Pi_+^c)$$

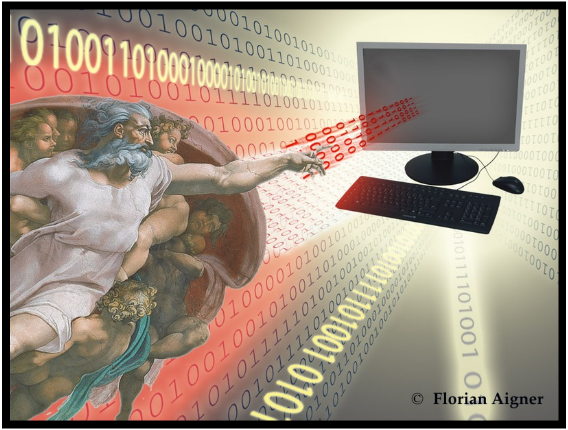
Full Extensionality

$$\frac{\Delta * (\forall X_\alpha.\mathbf{A}X \doteq^\beta \mathbf{B}X){\downarrow_\beta}}{\Delta * (\mathbf{A} \doteq^{\alpha\to\beta} \mathbf{B})}\,\mathcal{G}(\mathfrak{f}) \qquad \frac{\Delta * \neg\mathbf{A} * \mathbf{B} \quad \Delta * \neg\mathbf{B} * \mathbf{A}}{\Delta * (\mathbf{A} \doteq^o \mathbf{B})}\,\mathcal{G}(\mathfrak{b})$$

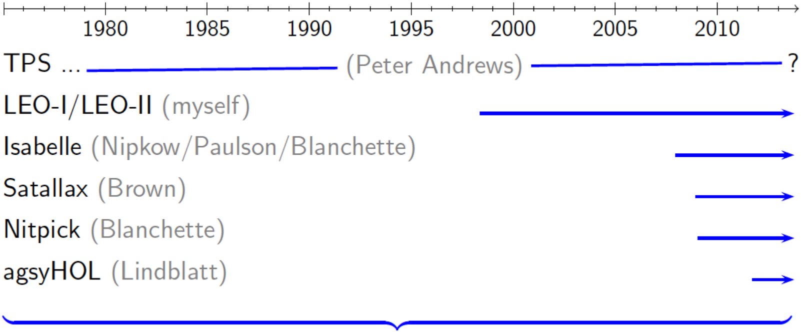
Initial. and Decomp. of Leibniz Equality

$$\frac{\Delta * (\mathbf{A} \doteq^o \mathbf{B}) \quad \mathbf{A},\mathbf{B} \text{ atomic}}{\Delta * \neg\mathbf{A} * \mathbf{B}}\,\mathcal{G}(Init^{\doteq})$$

$$\frac{\Delta * (\mathbf{A}^1 \doteq^{\alpha_1} \mathbf{B}^1) \;\cdots\; \Delta * (\mathbf{A}^n \doteq^{\alpha_n} \mathbf{B}^n) \quad n \geq 1, \beta \in \{o, \iota\}, h_{\overline{\alpha^n}\to\beta} \in \Sigma}{\Delta * (h\overline{\mathbf{A}^n} \doteq^\beta h\overline{\mathbf{B}^n})}\,\mathcal{G}(d)$$



Automated Proof Search and Consistency Check



- all accept TPTP THF Syntax [SutcliffeBenzmüller, J.Form.Reas, 2009]
- can be called remotely via SystemOnTPTP at Miami
- they significantly gained in strength over the last years
- they can be bundled into a combined prover HOL-P

Exploit HOL with Henkin semantics as metalogic
Automate other logics (& combinations) via semantic embeddings
— HOL-P becomes a Universal Reasoner —

```

What is Isabelle?
Isabelle is a generic proof assistant. It allows mathematical formulas to be expressed in a formal language and provides tools for proving those formulas in a logical calculus. Isabelle is developed at University of Cambridge (Larry Paulson), Technische Universität München (Tobias Nipkow) and Université Paris-Sud (Makarius Wenzel). See the Isabelle overview for a brief introduction.
Now available: Isabelle2013
Download for Mac OS X
Download for Linux - Download for Windows
Some highlights:
• Improvements of Isabelle/Scala and Isabelle/jEdit Prover IDE.
• Advanced build tool based on Isabelle/Scala.
• Updated manuals: isar-ref, implementation, system.
• Pure: improved support for block-structured specification contexts.
• HOL tool enhancements: Sledgehammer, Lifting, Quickcheck.
• HOL library enhancements: HOL-Library, HOL-Probability, HOL-Cardinals.
• HOL: New BNF-based (co)datatype package.
• Improved performance thanks to Poly/ML 5.5.0.
See also the cumulative NEWS.
Distribution & Support
Isabelle is distributed for free under the BSD license. It includes source and binary packages and documentation, see the detailed installation instructions. A vast collection of Isabelle examples and applications is available from the Archive of Formal Proofs.
Support is available by ample documentation, the Isabelle community Wiki, and the following mailing lists:
• isabelle-users@cl.cam.ac.uk provides a forum for Isabelle users to discuss problems, exchange information, and make announcements. Users of official Isabelle releases should subscribe or see the archive (also available via Google groups and Narkive).
• isabelle-dev@in.tum.de covers the Isabelle development process, including intermediate repository versions, and administrative issues concerning the website or testing infrastructure. Early adopters of repository versions should subscribe or see the archive (also available at mail-archive.com or gmane.org).

Automating Scott's proof script

Summary

- proof verified and automated
- KB is sufficient (critisized logic S5 not needed!)
- proof works for constant and varying domains
- exact dependencies determined experimentally
- ATPs have found alternative proofs (shorter)

Argument for inconsistency (from LEO-II's proof)

L1 **$\emptyset$ is essence of any entity:** $\forall x[\lambda y \lambda w \bot \; ess \; x]$
By D2 (ess):

L2 NE **is not exemplified:** $\neg \exists x NE(x)$
By A1a, A2, A5, L1 and D2 (ess)

$\Rightarrow$ **Inconsistency:** $\bot$
By L2, T1 and A5

Further Results

- **Monotheism holds**
- **God is flawless**
- **Self-identity $\lambda x(x = x)$ not needed in proof(s)**

Modal Collapse

$$\forall\varphi(\varphi \supset \Box\varphi)$$

- proved by LEO-II and Satallax
- for constant and varying domains

Main critique on Gödel's ontological proof:

- there are no contingent truths
- everything is determined / no free will
- why using modal logic in the first place?

- [P. Hajek, **A New Small Emendation of Gödel's Ontological Proof**, 2002]
- [F. Bjordal, **Understanding Gödel's Ontological Argument**, 1998]

Recent achievements:

- Formalization, Automation, Logic Variations
- Confirmation of Claims, Detection of Mistakes, Alternative Proofs

Ongoing and future work

- [M. Fitting, **Types, Tableaux and Gödel's God**, 2002]
- ...
- see `https://github.com/FormalTheology/GoedelGod/Literature`

Conclusion

Overall Achievements

- significant contribution towards a **Computational Metaphysics**
- **HOL** very fruitfully exploited as a **universal metalogic**
- systematic study of a **prominent philosophical argument**
- even some **novel results** were found **by HOL-ATPs**
- infrastructure can be adapted for **other logics and logic combinations**

Relevance (wrt foundations and applications)

- Theoretical Philosophy, Artificial Intelligence, Computer Science, Maths

Little related work: only for Anselm's simpler argument

- first-order ATP PROVER9 [OppenheimerZalta, 2011]
- interactive proof assistant PVS [Rushby, 2013]

Future work

- continuation of systematic study of the ontological argument
- further studies in **Computational Metaphysics**

Formel von Kurt Gödel: Mathematiker bestätigen Gottesbeweis

Von Tobias Hürter

picture-alliance/ Imagno/ Wiener Stadt- und Landesbibliothek

Kurt Gödel (um das Jahr 1935): Der Mathematiker hielt seinen Gottesbeweis jahrzehntelang geheim

Ein Wesen existiert, das alle positiven Eigenschaften in sich vereint. Das bewies der legendäre Mathematiker Kurt Gödel mit einem komplizierten Formelgebilde. Zwei Wissenschaftler haben diesen Gottesbeweis nun überprüft - und für gültig befunden.

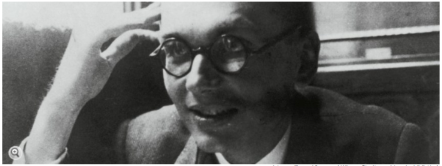
English Site > Germany > Science > Scientists Use Computer to Mathematically Prove Gödel God Theorem

Holy Logic: Computer Scientists 'Prove' God Exists

By David Knight



picture-alliance/ Imagno/ Wiener Stadt- und Landesbibliothek

Austrian mathematician Kurt Gödel kept his proof of God's existence a secret for decades. Now two scientists say they have proven it mathematically using a computer.

Two scientists have formalized a theorem regarding the existence of God penned by mathematician Kurt Gödel. But the God angle is somewhat of a red herring -- the real step forward is the example it sets of how computers can make scientific progress simpler.
